Middle East E-Commerce

Legal Disclaimer

PLEASE READ THIS LEGAL DISCLAIMER SECTION IN ITS ENTIRETY BEFORE PROCEEDING. NOTHING IN THIS DOCUMENT CONSTITUTES LEGAL, FINANCIAL, BUSINESS, OR TAX ADVICE. YOU ARE STRONGLY ADVISED TO CONSULT YOUR OWN LEGAL, FINANCIAL, TAX, OR OTHER PROFESSIONAL ADVISORS BEFORE ENGAGING IN ANY ACTIVITY IN CONNECTION WITH THE MEEC TOKEN OR THE MIDDLE EAST E-COMMERCE ECOSYSTEM.

Project Purpose

By accessing this document, you agree that you are acquiring, using, or evaluating MEEC solely to participate in the Middle East E-Commerce ecosystem and to access platform utility therein. Middle East E-Commerce and its affiliated entities act solely as arms-length technology operators in relation to the MEEC token distribution, and not as financial advisors or fiduciaries of any person with regard to the distribution of MEEC.

Token Utility

MEEC is a cryptographically-secure fungible utility token native to the Middle East E-Commerce ecosystem. It is a transferable representation of attributed utility functions specified in the platform protocol and is designed to be used solely as an interoperable utility token within the ecosystem.

MEEC is a functional utility token which may be used as a medium of exchange between participants within the Middle East E-Commerce ecosystem in a decentralized manner. MEEC is not, and is not intended to be, a medium of exchange accepted by the general public as payment for goods or services outside the ecosystem, nor for the discharge of any debt.

Token Characteristics — MEEC Expressly Does Not:

- Represent any shareholding, participation, right, title, or interest in Middle East E-Commerce or any affiliated entity.
- Entitle holders to any promise of fees, dividends, revenue, profits.
- Constitute a security in any jurisdiction, including but not limited to Oman, the European Union, the United States, Canada, Singapore, or any other relevant jurisdiction.
- Represent money, electronic money, a security, commodity, bond, debt instrument, or any other financial instrument.
- Represent a loan to the Company or any affiliated entity, or any debt obligation of the Company.
- Provide the token holder with any ownership or other interest in the Company or its affiliates.
- Carry any right to control, vote, or participate in the governance or management of Middle East E-Commerce.
- Guarantee liquidity, price stability, or availability on any secondary market.

Deemed Representations and Warranties

By accessing this document or participating in any MEEC-related activity, you represent and warrant that:

- In any decision to acquire MEEC, you have not relied on and shall not rely on any statement in this document as investment advice.
- You will ensure compliance at your own expense with all laws and regulatory requirements applicable to you.
- You acknowledge that MEEC may have no value, and there is no guarantee of value, liquidity, or return.
- Neither the Company nor its affiliates shall be responsible for the value, transferability, or liquidity of MEEC.
- The secondary market pricing of MEEC, if any develops, would be operated wholly independently of Middle East E-Commerce.

Regulatory Approval

No regulatory authority has examined, approved, or disapproved, whether formally or informally, any information set out in this document. No such action has been or will be taken under the laws, regulatory requirements, or rules of any jurisdiction. The publication of this document does not imply that applicable laws, regulatory requirements, or rules have been complied with.

Forward-Looking Statements

All statements in this document regarding future events, platform development, roadmap timelines, token utility expansion, and ecosystem growth constitute forward-looking statements. These statements involve known and unknown risks, uncertainties, and other factors that may cause actual results to be materially different from those described. No independent third party has reviewed the reasonableness of any such statements. The Company expressly disclaims any responsibility to release any revisions to these statements to reflect events after the date of this document.

No Distribution

No part of this document may be copied, reproduced, distributed, or disseminated in any way without the prior written consent of Middle East E-Commerce. By accessing any copy of this document, you agree to be bound by the foregoing limitations.

Executive Summary

Middle East E-Commerce (MEEC) is the native ERC-20 utility token of the Middle East E-Commerce ecosystem, a unified digital platform built to serve businesses, merchants, and consumers across the MENA region and internationally. The platform integrates multi-vendor e-commerce, used goods markets, global auctions, free zone commerce, social community, AI-powered recruitment, freelance services, real estate, escrow-protected payments, and an interactive gaming economy into a single coherent Super App.

MEEC functions as the financial utility layer of this ecosystem. It is used for merchant subscriptions, promotional activities, marketplace transactions, platform feature access, and the in-platform game economy. The token contract is deliberately minimal: fixed supply, no owner-controlled functions, no transfer taxes, no minting after deployment, and no upgradeable proxy — designed for maximum transparency and predictability.

Token	Platform	Market Opportunity
Symbol: MEEC Network: Ethereum ERC-20 Supply: 100,000,000,000 Tax: 0% Contract: Renounced	9 integrated modules MENA + 195+ countries AI-powered matching Escrow-protected payments Internal game economy	MENA e-commerce: $163B+ 65% population under 35 97% GCC smartphone penetration No dominant multi-vertical platform Target: 15 global exchanges

1. Introduction

Middle East E-Commerce (MEEC) is the native ERC-20 token of the Middle East E-Commerce ecosystem. The project is focused on building a unified digital environment that combines commerce, merchant services, service discovery, communication, real estate, recruitment, auction infrastructure, and platform-level utility in a single integrated ecosystem.

MEEC is designed as a platform utility token on Ethereum. The token contract follows a deliberately restrictive model: fixed supply, no owner-controlled functions in the token contract, no transfer taxes, no blacklist or whitelist logic, no post-deployment minting, and no upgradeable proxy pattern. This design is intended to keep token behavior transparent and predictable for users, merchant partners, external integrators, and exchange compliance teams.

1.1 The Problem

Digital commerce in regional and cross-border markets suffers from severe fragmentation. Users sell on one platform, communicate on another, find work on a third, and promote on a fourth. Each platform creates new problems while solving one. This fragmentation produces:

- Wasted time navigating multiple disconnected tools and platforms.
- Duplicated costs across subscriptions and advertising on different services.
- Weak trust between parties due to the absence of unified rating and escrow systems.
- Language barriers preventing cross-border commerce and communication.
- No structural link between commerce, communication, employment, and content.

1.2 The Solution

Middle East E-Commerce was built to eliminate this fragmentation. One account. One ecosystem. Nine integrated modules operating independently and in concert — with AI-powered matching, Escrow-protected transactions, real-time multilingual communication, and a native token economy connecting every layer.

2. Market Context

The MENA region represents one of the most significant underpenetrated opportunities in global digital commerce:

Market Indicator	Data Point
MENA e-commerce market (2025)	$163B+ projected, growing 7–9% annually
Population under 35	65% — highest youth proportion of any major market
GCC smartphone penetration	97% — mobile-first commerce is structural, not a trend
Dominant multi-vertical platform in MENA	None — the structural gap this platform addresses
Global e-commerce market (2025)	$6.86 trillion — MENA represents an early-stage highgrowth entry
Amazon total seller cost (2025)	35–45% of GMV — the exploitable pricing ceiling
Alibaba unrealized B2B transaction revenue	$14.5B+ annually at 0% take rate — the blueprint gap

No existing platform simultaneously addresses the convergence of traditional commerce, used goods, auctions, services, community, AI-powered recruitment, and real estate within a single cohesive ecosystem in the MENA region. This is not merely a feature gap — it is a structural impossibility for incumbents whose entire technology stack is optimized for a single-mode commerce model.

3. Platform Overview — Nine Integrated Modules

Middle East E-Commerce consists of nine core modules, each operating independently and interconnected within the full ecosystem:

#	Module	Description
01	Multi-Vendor Commerce	Full e-commerce infrastructure for managing stores, products, inventory, offers, and cross-border transactions. Includes used goods market and digital free zone commerce with tax-optimized cross-border trade.
02	Recruitment & Freelance Services	AI-powered matching between job postings and candidates. Integrated freelance services marketplace with Escrow-protected payment for service delivery.
03	Real Estate Marketplace	Transparent global real estate platform covering buy, rent, lease, and investment listings. Direct connection between sellers, buyers, and investors — no mandatory intermediaries. Supports instant translation for cross-border property discovery.
04	Global Auctions	Secure real-time auctions with Escrow-protected settlement. Supports rare collectibles, electronics, art, and charitable auctions. Anti-manipulation architecture with transparent bidding.
05	Social Community & Channels	Open social network linked directly to commerce activity. Content distribution based on real market data, not closed algorithms. Multi-language communities, brand profiles, and creator channels with autopilot promotional distribution.
06	Direct Communication (Real-Time Translation)	In-platform chat, voice, and video with AI-powered instant translation. Every participant reads messages in their own language automatically. Supports group channels, live broadcast, and unified inbox.
07	MEEC Token Economy	Native ERC-20 digital utility currency on Ethereum. Used for subscriptions, promotional activities, marketplace transactions, transfers, and game economy. Every user has a secure digital wallet designed for daily use.
08	Echo of Time — Game	Multiplayer interactive game connected to the platform economy via MEEC. Time is the core mechanic — actions affect future outcomes. Characters evolve, gain capabilities, and carry real value. Rewards active users and links entertainment to the ecosystem economy.
09	AI & Analytics	AI integrated across all modules for recommendations, automation, and analytics. Product recommendations, candidate matching, market analytics, promotional automation, price optimization, and demand forecasting. The system learns continuously from platform behavior.

4. MEEC Token Overview

Token Name	Middle East E-Commerce
Symbol	MEEC
Token Standard	ERC-20 with EIP-2612 Permit (EVM-compatible)
Network	Ethereum Mainnet
Decimals	18
Total Supply	100,000,000,000 MEEC (100 Billion — Fixed)
Supply Model	Fixed — No post-deployment minting
Transfer Tax	0% on all buy and sell transactions
Upgradeability	None — Immutable contract
Admin Control	None — Contract fully renounced
Burn Mechanism	None in the token contract
Blacklist / Whitelist	None
Contract Address	0xeD940743AFC221EAb5D0B8c2bC9a47E0664D1A20
Verification	Etherscan — Publicly verified
Type	Utility Token
Website	middleeastcommerce.net

5. Token Utility and Ecosystem Role

MEEC serves as the operational financial layer of the Middle East E-Commerce ecosystem. Token utility is derived exclusively from integration into platform mechanics — not from tax structures, privileged controls, or speculative design.

5.1 Current Utility Functions

Use Case	Description
Platform Payments	MEEC used as a payment method for marketplace transactions across all commerce modules.
Merchant Subscriptions	Businesses pay for platform subscription tiers and enhanced tools using MEEC.
Advertising & Promotion	Merchants and creators use MEEC to purchase promotional placements, featured listings, and advertising campaigns.
Auction Participation	MEEC used for auction deposits, bids, and settlement on the global auction module.
Freelance & Service Payments	MEEC held in escrow during service delivery; released upon confirmed completion.
Game Economy — Echo of Time	MEEC used as the in-game currency for the Echo of Time multiplayer game. Earned through platform activity, spent within the game economy.
Platform Feature Access	MEEC grants access to premium platform features, analytics dashboards, and advanced merchant tools.

6. Tokenomics and Distribution

6.1 Supply Model

MEEC follows a fixed-supply issuance model. The entire supply of 100,000,000,000 MEEC was minted at contract deployment to the designated recipient address. No additional tokens can be created after deployment. The contract does not support burn, mint, pause, or blacklist mechanics.

6.2 Full Supply Allocation

The following table discloses the complete allocation of the 100,000,000,000 MEEC supply:

Allocation Category	MEEC Amount	% of Supply	Lock / Vesting	Notes
Early Community Distribution	42,770,000,000	42.77%	None — fully liquid	Distributed to early buyers who participated in the pre-launch ecosystem phase. Selected via Random Selection Algorithm based on prior activity to prevent whale concentration. Tokens have been sent to recipient wallets.
Ecosystem & Network Reserve	41,230,000,000	41.23%	No team control	Free-floating supply held on the network. Not controlled by any team wallet or privileged address. Functions as decentralized network liquidity. Verifiable on-chain.
Exchange Listings	10,000,000,000	10%	Vesting 5 years	1,000,000,000 MEEC released every 6 months. Target: 15 global centralized exchanges over 5 years.
Marketing & Advertising	4,000,000,000	4%	Vesting 5 years	400,000,000 MEEC released every 6 months. Operational growth, campaigns, and platform promotion.
Development	2,000,000,000	2%	Vesting 5 years	200,000,000 MEEC released every 6 months. Product, engineering, and technical execution.
TOTAL	100,000,000,000	100%		Fixed supply — no additional tokens possible after deployment.

6.3 Vesting Release Schedule

Treasury allocations for Exchange Listings, Marketing, and Development are governed by the vesting contract. Releases occur every 6 months over a 5-year period:

Period	Date	Exchange Listings	Marketing	Development
Release 1	Q3 2026	1,000,000,000	400,000,000	200,000,000
Release 2	Q1 2027	1,000,000,000	400,000,000	200,000,000
Release 3	Q3 2027	1,000,000,000	400,000,000	200,000,000
Release 4	Q1 2028	1,000,000,000	400,000,000	200,000,000
Release 5	Q3 2028	1,000,000,000	400,000,000	200,000,000
Release 6	Q1 2029	1,000,000,000	400,000,000	200,000,000
Release 7	Q3 2029	1,000,000,000	400,000,000	200,000,000
Release 8	Q1 2030	1,000,000,000	400,000,000	200,000,000
Release 9	Q3 2030	1,000,000,000	400,000,000	200,000,000
Release 10	Q1 2031	1,000,000,000	400,000,000	200,000,000
TOTAL	5 Years	10,000,000,000	4,000,000,000	2,000,000,000

> Each release represents allocations from pre-allocated fixed supply reserves held under the vesting contract — not new token issuance. Total per release: 1,600,000,000 MEEC.

6.4 Liquidity Governance

Liquidity Lock Period	5 years from deployment
Pool Address	0xA8db993220Fa436F8b98c7bc60a894b19dBF3fE3
Vesting Contract	0xA98F06312b7614523d0f5e725e15fd20fB1b99F5
Lock Verification	app.uncx.network — publicly verifiable

7. Technical Design and Security

The MEEC token contract is intentionally minimal and engineered for predictable, neutral ERC-20 behavior. The design philosophy prioritizes immutability, transparency, and the removal of any administrative vector that could alter token behavior post-deployment.

7.1 Standards and Libraries

The contract is implemented using audited OpenZeppelin components:

- ERC-20: Standard token transfers, approvals, and allowances
- EIP-2612 Permit: Off-chain signature-based approvals for improved user experience without additional on-chain transactions

7.2 Fixed Supply Construction

The contract defines a fixed constant total supply: TOTAL_SUPPLY = 100,000,000,000 × 10^18. During deployment, the constructor mints the entire supply to the specified recipient address. Deployment to the zero address is explicitly blocked by the constructor logic.

7.3 Excluded Contract Capabilities

Treasury allocations for Exchange Listings, Marketing, and Development are governed by the vesting contract. Releases occur every 6 months over a 5-year period:

Excluded Feature	Security Rationale
No Ownable / AccessControl	No privileged account can alter token behavior after deployment
No Minting	Supply is permanently fixed at 100,000,000,000 MEEC
No Pause Function	Transfers cannot be frozen by any party
No Blacklist or Whitelist Logic	No address can be selectively restricted from transferring
No Fee-on-Transfer Mechanism	Zero deductions on any transfer — 0% tax on all transactions completion.
No Burn Extension	Supply cannot be reduced
No Proxy / Upgradeability Pattern	Contract logic is immutable and cannot be changed post-deployment

7.4 Security Principles

The token design reflects the following security philosophy:

- Immutable token logic — no party can change contract behavior.
- No administrative account capable of altering token mechanics.
- No ability to freeze holders or selectively restrict transfers.
- No hidden deductions or balance manipulation mechanics.
- Full transparency — all contract code and transactions publicly verifiable on Etherscan.

8. Roadmap

The following roadmap reflects the planned development and expansion of the Middle East E-Commerce ecosystem. All milestones are forward-looking and subject to change based on market conditions and operational execution

2026 — Beta Completion and Initial Launch

- Finalize the beta phase and launch the first official platform release.
- Onboard early strategic merchant and partner network.
- Establish initial logistics and payment infrastructure.
- Activate MEEC token utility across merchant subscriptions and advertising.
- Submit for listing on first cohort of centralized exchanges (target: 3 exchanges by end of 2026).
- Deploy escrow payment system across all commerce modules.

2027 — Scaling and Ecosystem Expansion

- Strengthen logistics and operational coverage across active regions.
- Introduce AI-assisted recommendation and workflow capabilities across all nine modules.
- Launch real-time communication functions with full multilingual translation.
- Expand exchange listing program (target: 8 exchanges total by end of 2027).
- Expand merchant and partnership network across MENA region.
- Launch MEEC-powered referral and loyalty reward programs.
- Activate the Echo of Time game economy with MEEC integration.

2028 — Global Expansion

- Extend platform presence across broader international markets (target: 195+ countries active).
- Reach target of 15 global centralized trading platforms for MEEC listing.
- Scale AI and automation capabilities to enterprise-level merchant tools.
- Deepen free zone commerce infrastructure for cross-border trade optimization.
- Launch advanced financial services layer including MEEC-denominated escrow at scale.

9. Team and Operations

9.1 Core Leadership

Name	Role
Khaled Alshaar	CEO and Project Director
Layla Tawil	Deputy CEO
Ibrahim Anjro	Operations Manager
Waleed Albarghouthi	Manager

9.2 Technical and Product Team

Name	Role
Bilal Alshayah	Team Leader and Mobile Application Developer
Mohamad Shaban	Flutter Developer
Zakaria Zhlat	Front-End Developer
Bilal Khubieh	Front-End and Systems Developer
Ahmad Odeh	Back-End Developer
Saleh Lala	Back-End Developer
Bilal Mardini	Back-End Developer
Abdalrahman Alkateb	Back-End Developer
Mohammd Mdani	Cloud Engineer and DevOps

9.3 Design, QA and Marketing

Name	Role
Mohammad Tarek Almosali	UI/UX Designer
Wedad Joulaq	UI/UX Designer
Aya Tawil	Graphic Designer
Weaam Tawil	Brand Identity Designer
Afaf Tawil	Interior Designer
Marina Nabil	Content Writer
Aya Alhomsi	QA Tester
Khaled Idrees	SEO Specialist and Content Manager
Omar Rachid	Marketing Specialist

10. Risk Disclosure

Participation in digital asset ecosystems involves substantial risk. The following risk categories are relevant to MEEC and the Middle East E-Commerce ecosystem. Prospective participants must read this section carefully and conduct their own independent due diligence.

Market Risk

The price of MEEC on secondary markets, if any develop, may be subject to significant volatility driven by factors outside the control of Middle East E-Commerce, including but not limited to: general cryptocurrency market conditions, macroeconomic events, changes in investor sentiment, and regulatory developments. There is no assurance that MEEC will maintain any particular value or that any secondary market will develop at all.

Liquidity Risk

There is no guarantee that MEEC will be listed on any centralized or decentralized exchange, or that any secondary market providing liquidity will develop. Even if a secondary market develops, there is no assurance of sufficient liquidity at any given time. Participants may be unable to sell or transfer MEEC at any price.

Regulatory and Compliance Risk

The legal and regulatory classification of digital assets, including utility tokens, varies significantly across jurisdictions and is subject to rapid change. Regulatory actions in any jurisdiction could negatively impact MEEC, the Middle East E-Commerce platform, or both. The Company may be required to cease operations in certain jurisdictions if regulatory requirements make it legally or commercially unviable to continue. Participants are solely responsible for ensuring their own compliance with applicable law.

Smart Contract Risk

The MEEC token contract is designed following best practices and uses audited OpenZeppelin libraries. However, no software system can be guaranteed free of vulnerabilities. Bugs, exploits, or unforeseen interactions with third-party protocols could adversely affect MEEC or participant holdings. The contract is immutable — errors cannot be corrected post-deployment.

Platform Adoption Risk

The value of MEEC as a utility token depends on the successful adoption and growth of the Middle East E-Commerce platform. Platform adoption may be slower than projected, or may not occur at all, due to competitive pressure, technical difficulties, regulatory challenges, or failure to attract sufficient merchant and user participants.

Operational and Execution Risk

The development and operation of the Middle East E-Commerce ecosystem depends on the continued performance of the team, access to development funding, third-party infrastructure providers, payment processors, and logistics partners. Loss of key personnel, technical failure, or third-party dependency failure could adversely affect ecosystem development.

Security and Cyber Risk

The platform and associated digital infrastructure may be subject to cyberattacks, malware, denial-of-service attacks, or other malicious interference. While security practices are implemented throughout development, no system is immune to attack. A successful attack could result in loss of funds, data, or operational capacity.

Risk of Dissolution

Start-up technology companies face significant financial and operational risk. It is possible that Middle East E-Commerce may fail to achieve commercial viability due to unfavorable market conditions, failure of commercial partnerships, intellectual property challenges, or other factors. In such circumstances, MEEC may have no utility and no value.

> The risk categories above are not exhaustive. Additional risks not identified here may exist. You should conduct full independent due diligence on the project, the team, the technology, and the regulatory environment applicable to you before making any decisions.
